Recyclable Vacuum Pouch

Driven by the desire to offer environmentally sustainable products, NPP is delighted to present Vac 95+. Vac 95+ is a side seal vacuum bag which is 100% recyclable.

The high barrier properties water vapour H₂O, oxygen O₂, carbon dioxide CO₂ and nitrogen N₂ ensure that food can be preserved for a long time. Perishable foodstuffs, including cheese, meat, fish and vegetables, can be vacuumed and protected from spoilage.

The Vac 95+ can be used on all standard vacuum chamber machines due to its excellent sealability.

To identify the bag, the note "100% recyclable" is printed on it in green colour.

Once the bag has been disposed of properly, the material can be identified and sorted out by up to date recycling plants. The recycle can be reused for new products.

Benefits

- Environmentally friendly
- Preserves the aroma, the colour and freshness of food for a longer period
- Extends shelf life reducing in less food waste
- Excellent transparency and puncture resistance

**100%
Recyclable**

Features
